

Empowering **natural** sources

The best solutions for food, pet food and pharma

As a family owned company with over 45 years experience in the global protein manufacturing, we are dedicated to harnessing the full potential of natural resources sustainably and responsibly.

We proudly operate with a circular mindset, ensuring that every part of the animal is valued—from nose to tail, hide to horn. Through innovation, global collaboration, and an unwavering commitment to quality, we support sustainable nutrition and maximize the use of every natural source. As a company, we strive to minimize our impact on the environment, via our commitment to our ESG policies. Our mission is to nourish the world by unlocking the full value of nature's resources. A world where every natural source is empowered—nothing wasted, everything valued.

Our Commitment to Quality and Sustainability

Total Circularity

We transform by-products into valuable inputs across industries. Our approach reduces environmental impact and maximizes the use of every resource, benefiting people, animals, and the planet.

Environmental, Social, and Governance (ESG)

We actively uphold ESG principles, with a focus on ethical sourcing, energy efficiency, waste reduction, and responsible partnerships. Our sustainability journey is ongoing, innovative, and transparent.

Quality Assurance

Our operations adhere to the highest international standards, supported by:

- Rigorous quality control systems
- Halal and organic certifications
- Fully traceable supply chains
- Compliance with global food safety regulations

Why Our Mission Matters

At Esro Food Group, we believe that the future of food, health, and sustainability begins with respect for natural resources. Our mission—Empowering Natural Sources—is not just a slogan, but a promise: to give value to every part of the animal, to waste nothing, and to make everything count.

In a world where resources are becoming scarce and food security is increasingly vital, we choose a circular approach. By transforming by-products into high-quality ingredients for the food, pet food, and pharmaceutical industries, we contribute to a more efficient supply chain and a healthier planet.

Our mission creates value on multiple levels:

- For people: nutritious, safe, and traceable products
- For animals: species-specific nutrition of premium quality
- For society: less waste, more sustainability
- For science: biotechnological building blocks from natural sources

Through innovation, collaboration, and responsibility, we turn every part of the animal into a source of progress. This is how we build a world where natural resources are not depleted—but empowered.

*Esro Food Group – Empowering **Natural** Sources*

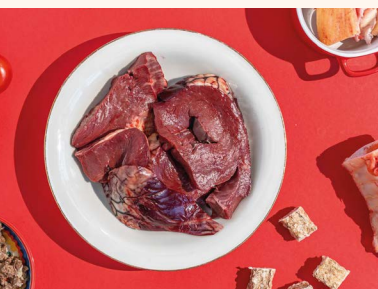

Edible solutions

At Esro Food Group, nutrition begins with valuing every part of the animal. We process beef by products which are packed with essential nutrients such as iron, vitamin A, and protein. Although these parts are often underutilized, they offer exceptional nutritional value and are increasingly being incorporated into sustainable food concepts.

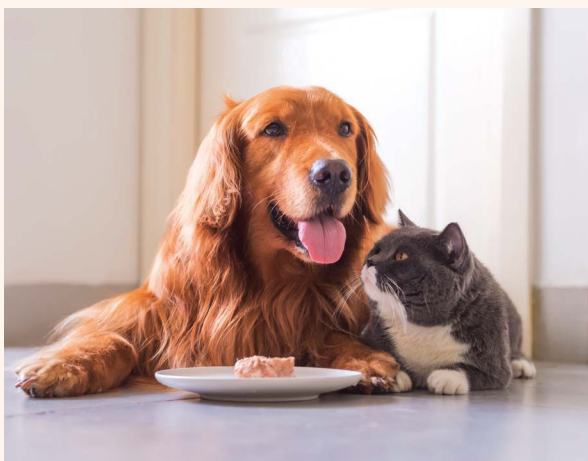

Our products are available fresh or frozen, depending on customer requirements. With full traceability, halal and/or organic certifications, and customized specifications, we deliver not only ingredients but also reliability and quality. In this way, we contribute to safe, nutritious, and responsible food for people around the world.

*Creating value
together by honoring
nature's potential*

Pharma solutions

In our pharmaceutical division, we work with carefully selected beef-derived materials to create high-quality ingredients for medical research and biotech applications. These raw materials are carefully sourced and processed in USDA and EU-approved facilities. They form the basis for cell culture, and other pharmaceutical applications.

Our products meet the highest standards of purity, traceability, and reliability. By converting natural components into biotechnological-grade materials, we strengthen the link between nature and science. In this way, we contribute to a healthier future, in which animal raw materials play a crucial role in progress and healing.

Petfood solutions

As a leading supplier of raw materials to the pet food industry, Esro Food Group offers tailor-made, species-specific solutions produced in our dedicated pet food facility. We process a wide variety of animal species—including beef, pork, venison, lamb, and fish—which allows us to develop custom blends that meet the unique nutritional needs of different pets.

Whether it's a high-energy dog, a selective cat, or a rabbit with specific dietary requirements, our ingredients are designed to support optimal health and well-being. We offer both raw organs and ground mixes, all plate-frozen to preserve freshness, nutritional integrity, and shelf life. By collaborating closely with pet food brands and distributors, we co-create innovative formulations that maximize the value of natural proteins while ensuring safety, consistency, and quality.

A Sharp eye for Quality

Each production site has its own QA team to monitor product and process quality. In addition, our QSHE manager ensures a safe and responsible working environment, with attention to hygiene, safety, and environmental care.

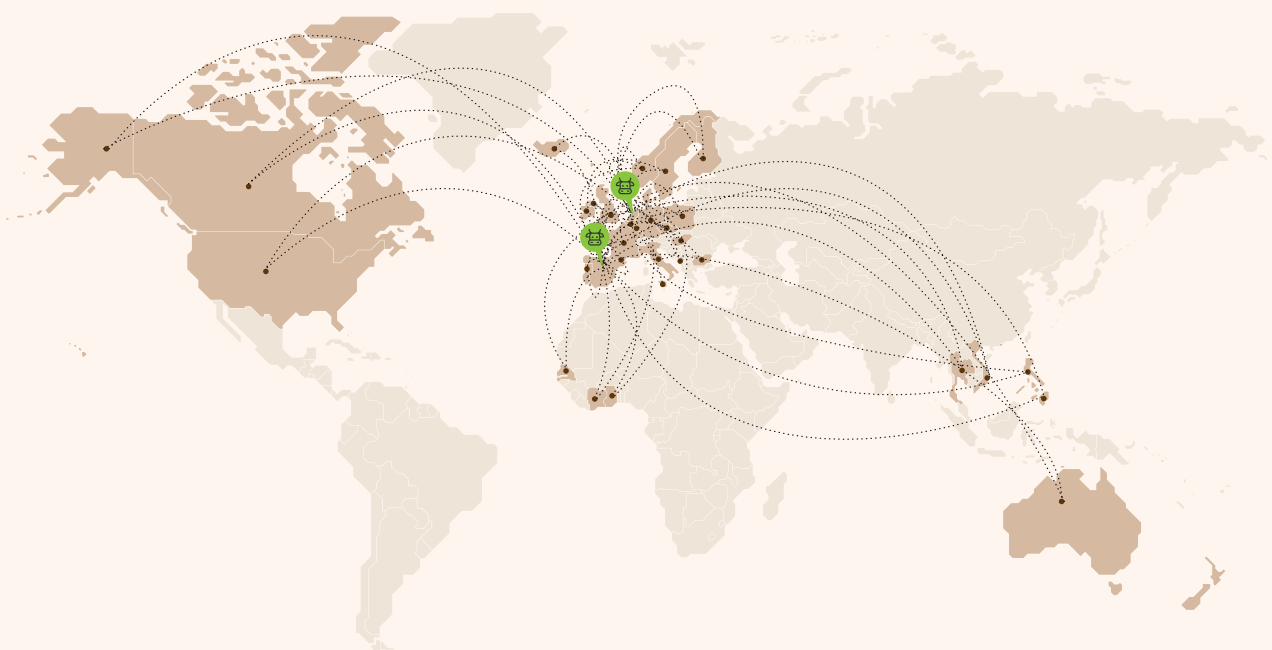

To stay aligned with customer needs, we work with an in-house product developer who tests new formulations and helps translate ideas into practical applications. This way, we stay close to our customers and close to the field.

Global Reach, Local Commitment

With multiple production sites across Europe, we are well positioned to respond to customer needs quickly and flexibly. This network allows us to offer tailored solutions and maintain consistent quality across regions. Our presence across Europe allows us to stay close to our customers, understand local needs, and respond with agility. It's how we combine scale with personal service.

At Esro, we believe that control starts at the source. We collect part of our raw materials directly from suppliers using our own trucks. This allows us to keep the supply chain manageable and respond quickly and carefully when needed.

Our colleagues coordinate international transport and ensure smooth operations—from documentation to cold chain management. Thanks to this hands-on approach, we maintain control over the supply chain from start to finish, with short lines and clear responsibilities.

Our Purpose

At Esro Food Group, quality and sustainability are at the heart of everything we do. Our mission to empower natural sources is reflected in a circular approach where every part of the animal is given a meaningful purpose. From head meat to organ meat, from pharmaceutical ingredients to pet food blends, nothing is wasted.

We believe that responsible processing is not only better for the environment but also creates value across industries. By making the most of what nature provides, we contribute to a food system that is efficient, respectful, and future-focused. This purpose guides our daily decisions, from sourcing and processing to product development and partnerships. It's how we stay true to our values while delivering practical solutions.

“Taking care of our natural resources, because we want to.”

Esro Food Group comprises various companies operating globally in the field of high-protein animal by-products. We serve the edible, API and pet food industries, providing comprehensive logistical support to ensure efficient delivery. Our approach is to process natural resources in the most optimal way, always with maximum focus on sustainability. We work with passion and care, actively extending these values to our customers and suppliers.
